

Provider[®] Nurse Call Pillow Speaker Integrates with Interactive Televisions and Streamlines Patient Interactions

FOR IMMEDIATE RELEASE

June 7, 2016 - NILES, IL -- Interactive televisions provide an important link between the hospital and the patient; offering communications with important players in direct care and administration, all the way to post-procedure and discharge services. There are also the entertainment outlets it provides, from games to movies, to social media communications.

Provider Nurse Call Systems, by Jeron Electronic Systems, Inc., integrates with the most popular interactive TV systems, allowing facilities to choose the system that best meets their needs and to make the choice separate from the nurse call selection. Interactive television systems have dramatically changed the patient experience within facilities. Healthcare administrators are learning that the in-room television is now the information and entertainment portal for both patients and their families.

“Hospitals using interactive technology to communicate with patients are increasing their patient satisfaction scores. Once again, we are providing a component to streamline patient workflow and communications within the patient room, said Myles Cochran, Director of Marketing for Jeron Electronic Systems, Inc. “Our pillow speakers provide that conduit for easy patient-to-staff interactions.”

Facilities will work with Jeron and their network of distributors to obtain the appropriate Jeron pillow speakers that will connect to specific interactive television systems.

A few highlights of Interactive TV systems integrated with Provider Nurse Call:

Keeps Patients Entertained and Informed: in addition to entertainment programming, interactive TV systems typically deliver staffing and facility information, health information, pre-op and post-op videos, meal ordering, and internet access

Supports Easy Access from Bed: with the single pillow speaker device patients can control in-room systems

Drives Patient Satisfaction: the personalized interactive TV solutions combined with streamlined patient to staff alerting and communication leads to an improved patient experience
