Advanced Technology Contributes to Jeron® Provider® 680 Nurse Call Sales Milestone

FOR IMMEDIATE RELEASE

NILES, IL - August 22, 2016 -- Jeron Electronic Systems, Inc. is excited to announce a sales milestone with this month's shipment of their 7,500 Provider 680 Nurse Call System.

"Year over year, the sales of Provider 680 Nurse Call Systems have grown to become the first choice of many healthcare facilities all leading to this exciting sales milestone." said Mark McNicholas, Jeron's National Sales Manager. Mark continued, "Our not so secret-to-success is how Jeron continues to invest and expand on the capabilities of the Provider 680 System to meet the needs of our customers turning them into loyal and repeat customers."

Most recently, the Provider 680 Nurse Call System added advanced Ethernet networking, Voice over IP audio, and a collection of LAN-accessible software options for wireless alerting, communications, and reporting. These recent advancements support:

Call Activity and Reporting – generate reports to spot trends in staff responses before patient satisfaction is affected

Wireless SIP Phone Integration – route patient calls directly to their assigned caregiver; keeping staff mobile and in direct communication with their patients

LAN-Based Staff to Patient Assignments – from any networked computer, nurse managers can manage staff to patient assignments

Team Alerts – urgent calls, such as code blue, bed exit, and staff emergency can route to multiple caregiver's wireless devices to speed response

Barcode On/Off Duty and Break – caregivers simply scan themselves on/off duty, on break, or their assigned wireless device for the shift

Real-Time Locating – Provider 680 integrates with the most popular real-time locating systems on the market supporting automatic staff registration in and out of patient rooms and staff locating from any nurse console

Call Activity Display – from any networked computer, managers can monitor call activity including a floor map view of calls and staff presence

Automated Overhead Paging – integration with the facility's public address system lets Provider 680 broadcast announcement alerts for urgent calls to caregiver teams

The flexibility and scalability of Provider 680 lets facilities choose any combination of these network-based features. The integration with Jeron's flagship, Provider 790 Nurse Call System, will also let them easily add options in the future without replacing what they've already purchased. Respecting the investment their customers have made, the advancements are backwards compatible with existing Provider 680 Systems.
