

Compact, Area of Rescue System Perfect for Smaller Facilities

Area of Rescue Assistance ensures communication in specific building locations for occupants who cannot traverse a difficult space or most often time stairwells. Complying with AOR requirements as defined by the ADA (Americans with Disabilities Act) and the NFPA (National Fire Protection Agency) this system will place immediate calls to off-site or on-site personnel notifying them of a life safety situation. Tone assurance starts with a push of a button and emergency personnel is notified.

ProAlert™ 450

- Supervised wiring to guarantee system is always functional; if technical issues occur, tone annunciates trouble
- Calls can only be answered at the annunciator
- Station choice of white decorative wall mount or high security stainless steel flush mount
- Cat-5 and/or CI Cable
- Hands-free communication

Pro-Alert 450 is a compact system that virtually eliminates installation costs because of its relatively minimal need for conduit, wire and labor.

For over 55 years, Jeron has been working with security integrators like you for value communication options to bring to our end-users. We can help you determine what a small-scale facility needs to fulfill their ADA requirements.
