

## Provider<sup>®</sup> ASC Automates Processes and Workflows for Ambulatory Surgery Centers and Clinics

### IMMEDIATE RELEASE

**June 25 – Niles, IL** - - As Ambulatory Surgery Centers (ASC) and clinics are becoming main deliveries of healthcare, facilities must optimize their workflows to provide a safer and more efficient healthcare experience. The ASC/Clinic functionality of Provider Nurse Call supports facilities in these endeavors by eliminating manual processes while giving clinicians a complete view of which rooms have patients, who has been waiting the longest, and where each clinician is needed next.

The traditional, manual clinic flag system can't automate processes as they can't display how long a patient has been waiting or automatically remind the provider who is next to be seen. Using the [Provider ASC System](#) creates a digital visibility and typical clinic workflows and patient statuses are now automated and tracked electronically. The facility-wide information includes patients waiting to be seen, room status, where clinicians are needed next, and even automated procedure timers and reminders.

Provider ASC/Clinic features include:

- Clinician sequencing; showing each clinician which patient they need to see next and how long they have been waiting
- Managing multiple events (patient present, clinician present, clinician needed) for each exam/procedure room at the same time; each clinician has their own unique color indicator
- Viewing room, patient, and clinician status from the dome light outside each room, wall-mounted touchscreen displays, and from any PC on the network
- One-touch alerts of urgent events to other team members along with voice communication

Sean Doherty, National Sales Manager for Jeron Electronic Systems, Inc. remarks that, "Most ASCs and Clinics are reimagining their patient flow to begin seamlessly and perhaps even before the patient reaches the office. Automatic rooming and sequencing can be done with less footprint than ever. Provider ASC is replacing antiquated flag systems to track processes, patients, and providers. Changing to an automated system is the easiest thing that can be done for patient safety and create less risks during these crisis times."

Jeron Electronic Systems, Inc. is the leading manufacturer for Provider Nurse Call Systems. Their flagship system uses VoIP technology and digital full duplex intercoms ensures clear communications throughout facilities large and small, including ASCs and clinics. The flexibility of the system allows facilities to choose options and integrations to best meet their unique applications to drive better patient experiences and streamline caregiver workflow processes.
