

# JERON'S HISTORY

## Over Sixty Years of Investment and Growth

Jeron was founded in 1965 at a residence on the north side of Chicago. The "Jer" of Jeron is for Jerry Chesnul who is the CEO and head of Jeron's Engineering Department today. While Jeron systems are sold worldwide, Jeron Electronic Systems, Inc. is still a family-run business headquartered just ten miles from where it all began over sixty years ago.

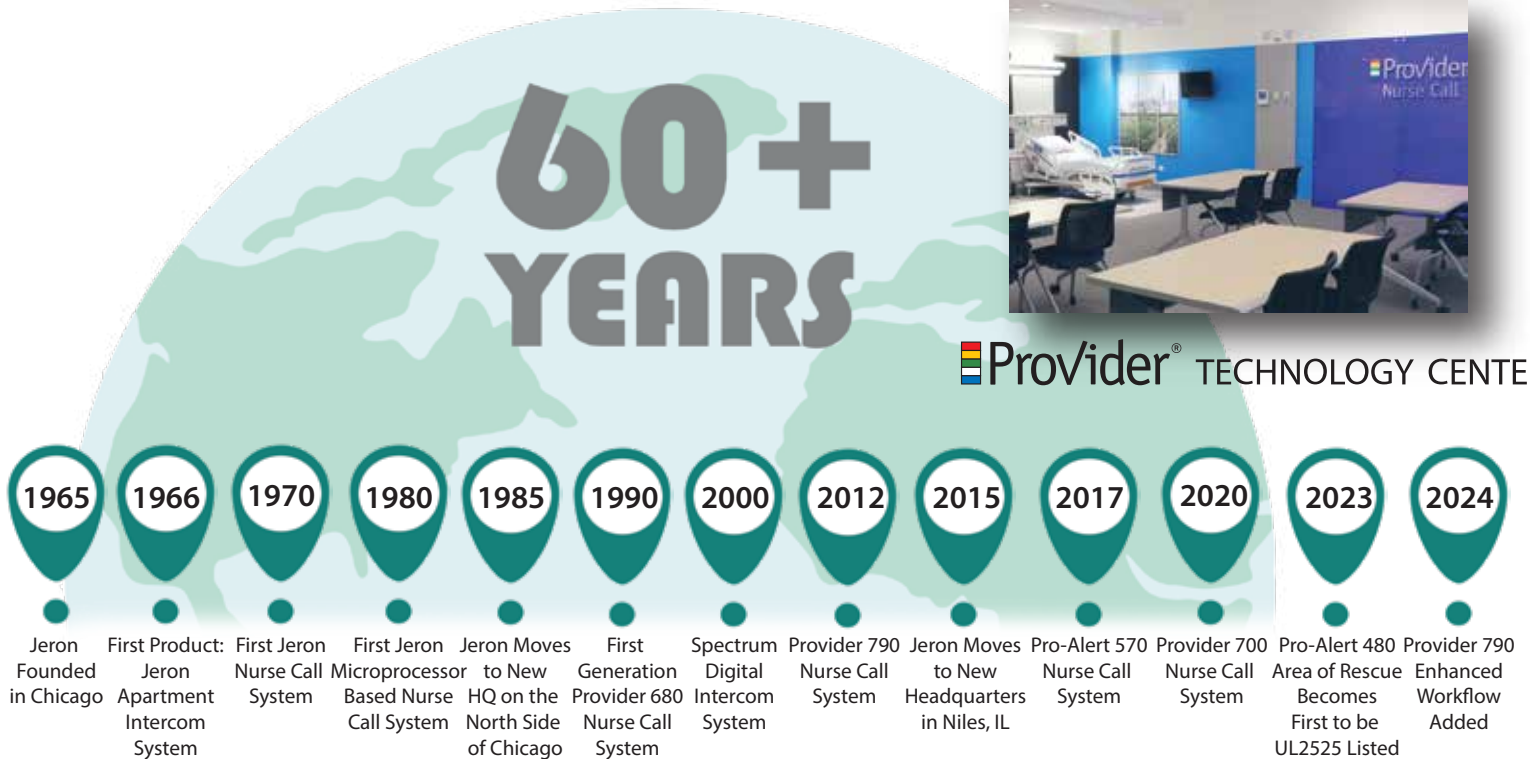

In 2015, Jeron moved from Chicago to the suburb of Niles, Illinois. The new Jeron headquarters provides the much needed additional space for manufacturing, the new engineering design and testing center, and a new end-user focused, hands-on presentation space called the **Provider Technology Center**.

Throughout the years, Jeron has maintained a family focus including a direct line of communication from customers directly to senior management, enabling a nimble product design and manufacturing process that meets the ever changing needs of facilities today.

## Intercom to Nurse Call

Starting in the mid-1970s, Jeron entered the healthcare market with the first nurse call platform. Since then, Jeron's leveraged their design and manufacturing skills to continually evolve to meet every-changing healthcare requirements. Today, Jeron offers a complete continuum of healthcare communications to meet the needs and budgets of healthcare facilities worldwide.

Assuring their customers of unparalleled reliability and safety, Provider's Nurse Call systems are certified by Underwriter's UL 1069 standard for "Hospital Signaling and Nurse Call Equipment."

## Investing in the Future and a Visit to Jeron

Jeron continues to expand the functionality and scalability with the production of Provider 700 Nurse Call System which seamlessly integrates with Jeron's flagship Provider 790 platform for the acute care market.

Customers have an open invitation to visit the corporate office and factory in Niles, IL. Under a single roof, visitors will see the start to finish of Made-in-the-USA systems from design lab through manufacturing, testing, warehousing, and shipping. A tour includes a Provider Technology Center visit where clinical and technical visitors can experience the full breadth of Pro-Alert Area of Rescue Systems and Provider Nurse Call Systems' options and integrations.
